CORTICAL & CANCELLOUS BONE

Donor Management According to The US GTP

Completed approval by the MFDS, Thorough donor management at the level of The US GTP, verification of tissue safety and securing effectiveness

Own Manufacturing·Production System

Establishment of our own manufacturing system with our own production facilities

Possession of Various types of Products

Customized product supply system with various ratios to meet customer needs

Excellent New Bone Formation Rate

Promotes osteoblast adhesion and new bone formation by maximizing osteoinduction and osteoconduction effects

User-Friendliness

Optimized for user convenience with a curved syringe suitable for indication

Indication

Sinus lift

Horizontal augmentation

Extraction socket

GBR

Periodontal defect

Peri implant defect

Product Information

Customizable by ratio

Source	Content	Type	Particle size	Weight (Volume)
Allograft (FDBA)	Cortical 70% Cancellous 30%	Syringe	250 μ m ~1000 μ m	0.25 cc
				0.5 cc
				1.0 cc

Human Tissue

Sterilized product

Single use
